Allomet Insert Blanks are produced utilizing high-value powdered metals brazed to the tip of the insert. The powder is produced from a patented and proprietary powder metal production method known as "Tough-Coated Hard Powder (TCHP)" process technology. The TCHP process results in strength, durability and wear resistance properties never attainable with carbide tools. Allomet's unique family of cutting tools, tool blanks and disks are produced using the TCHP process, resulting in "Hard 'N Tough" cutting tool material - increased hardness without sacrificing toughness. These products are branded as EternAloy HNT.

EternAloy® Hard 'N Tough.....Taking Wear Resistance to the Extreme.™
